

Electronic Leak Sheets and Bluetooth Connectivity

Paperwork Without the Paper!

Let the Gas-Explorer fill out your leak sheet while you work with no messy paperwork or cumbersome extra steps. Custom software together with an Microsoft Access based program on a PC or mobile device, organizes and transfers leak investigation data in a format that matches your company's system.

Electronic Leak Sheets follow a structured approach—your company's approach—to remind personnel of what needs to be done and the order in which to do it. With the Gas-Explorer automatically recording data, service technicians can take all the guesswork out of a leak investigation.

Fill out your leak sheet with the Explorer's simple three-button operation or wirelessly transfer data to any Bluetooth enabled device. Add GPS to the Electronic Leak Sheet option and turn the Gas-Explorer into the ultimate leak inspection device.

*Pricing based on system requirements and customer needs.
