TITLE: ENVIROMENTAL STEWARDSHIP AND CARBON MANAGEMENT POLICY STATEMENT			

Environmental Stewardship and Carbon Management Policy Statement

For the last thirty years, the Company has specialized in the development, manufacture and distribution of gas detectors for monitoring and control of ambient atmospheres. The Company believes that its contributions in minimizing and, where possible, eliminating fugitive emissions, particularly of methane, have led to a decidedly positive impact on the environment.

Furthermore, the Company's product – CCD-201 – is used by organizations to ensure compliance with United States Environmental Protection Method 21 – Determination of Volatile Organic Compound Leaks. EPA Method 21 requires the reporting and remediation of volatile organic compound leaks of at least 10,000 ppm (typically smaller).

The Company employs a continuous improvement mindset towards environmental stewardship and carbon management. The Company will strive to optimize its use of resources through good design and conservative operating practices. The direct environmental impacts of the company's operations are minimized wherever possible by using up-to-date technology and appropriate equipment. Environmental conservation constitutes a significant selection criterion whenever a choice is to be made among practical alternatives, including between suppliers.

It is the policy of the Company to adhere to both the letter and spirit of environmental laws and regulations. Meeting legal and ethical obligations is always a company priority. The Company will communicate any environmental issues or concerns as specified in its HSCHP. The Company will continue to ensure that its personnel have the training and resources to enable the company to meet its environmental goals.
