

Environmental Policy Statement

Environmental Policy

- It is the policy of Bascom-Turner Instruments to adhere to the letter and spirit of environmental laws and regulations. Meeting our legal obligations is always a company priority.
- Bascom-Turner will strive to optimize its use of resources through good design and conservative operating practices. Environmental conservation constitutes a significant selection criterion whenever a choice is to be made among practical alternatives.
- Bascom-Turner will continue to ensure that its personnel have the training and resources to enable the company to meet its environmental goals.

Environmental Impact

- For the last thirty years, Bascom-Turner Instruments has specialized in the development, manufacture and distribution of gas detectors for monitoring and control of ambient atmospheres. The company believes that its contributions in minimizing and, where possible, eliminating fugitive emissions, particularly of methane, have led to a decidedly positive impact on the environment.
- The direct environmental impacts of the company's operations are minimized wherever possible by using up-to-date technology and appropriate equipment.
- The company has little control, given its size, over the environmental policies of its supply chain. However, when there are viable choices among suppliers, the company will take into account the environmental record of possible suppliers as a significant factor in its supplier selection.
